

Beyfortus Product Codes

CPT^{®a} code **90380** or **90381** should be assigned on all claims for Beyfortus. These codes describe a 0.5-mL dose and a 1-mL dose of this pediatric, once per season, passive immunization for RSV^b. It is not necessary to use modifier-51 when reporting these codes. See the grid below for more information on billing these codes.

CPT Code	Code Description	Suggested Use
90380	Respiratory syncytial virus, monoclonal antibody, seasonal dose; 0.5 mL dosage, for intramuscular use	Bill 1 unit of 90380 when a 0.5-mL dose is provided.
90381	Respiratory syncytial virus, monoclonal antibody, seasonal dose; 1 mL dosage, for intramuscular use	Bill 1 unit of 90381 when a 1-mL dose is provided.
		Bill 2 units of 90381 when a 2-mL dose is provided.

Beyfortus Administration Codes

The administration of Beyfortus is reported in addition to the product code. On October 6, 2023 CPT released 2 new codes to report the administration of Beyfortus, effective immediately. Report the administration service with code 96380 or 96381 based on if a physician or other qualified healthcare professional (QHCP) provided counseling on the same date as the administration of Beyfortus. Do not report immunization administration codes 90460–90461 or 90471–90472 for administering Beyfortus, as these codes are limited to the administration of vaccine and toxoid products. See the grid below for more information on which administration code to choose when billing for administration of Beyfortus.

Code	Code Description	Suggested Use
96380	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional (Report 96380 for administration of respiratory syncytial virus, monoclonal antibody, seasonal dose [90380, 90381])	For the administration service, when counseling is performed by a provider who independently bills, such as a physician or other qualified health care professional, report 96380 with the Beyfortus product code 90380 or 90381. Bill 96380 when any size dose of Beyfortus is administered and the counseling requirement is met.
96381	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection (Report 96381 for administration of respiratory syncytial virus, monoclonal antibody, seasonal dose [90380, 90381])	For the administration service, when counseling is not performed by a provider who independently bills, report 96381 with the Beyfortus product code 90380 or 90381. Bill 96381 when any size dose of Beyfortus is administered and the counseling requirement is not met.

Beyfortus is **indicated** for the prevention of respiratory syncytial virus (RSV) lower respiratory tract disease in:

- Neonates and infants born during or entering their first RSV season.
- Children up to 24 months of age who remain vulnerable to severe RSV disease through their second RSV season.

IMPORTANT SAFETY INFORMATION

Contraindication

Beyfortus is contraindicated in infants and children with a history of serious hypersensitivity reactions, including anaphylaxis, to nirsevimab-alip or to any of the excipients.

Please see additional Important Safety Information continued on [page 2](#).

National Drug Codes (NDCs)

Some payers require an NDC in addition to the CPT code for the product. In such cases, it is important to format the NDC correctly or the claim will be denied and you will need to resubmit a corrected claim in order to be reconsidered for payment. Begin by determining if the payer requires the carton NDC or the unit-of-use NDC. On line 24A, place qualifier N4, the 11-digit NDC number (without hyphens), the Unit-of-Measure, and Units Dispensed. To convert the Beyfortus NDC to the required 11-digit format, add a leading zero in the middle section of numbers (ex. 49281-575-00 = 49281-**0**575-00). Unit-of-Measure, ML, is reported when the product is supplied in a liquid format. Units Dispensed is the actual decimal quantity administered. Continue to bill CPT code 90380 or 90381 and the appropriate administration code. Below is how to submit the NDCs for Beyfortus.

When the Payer Requires Carton NDC	When the Payer Requires Unit-of-Use NDC	Description
N449281057515 ML0.5	N449281057500 ML0.5	Carton of 5, 0.5-mL prefilled syringes (5x1)
N449281057415 ML1.0	N449281057488 ML1.0	Carton of 5, 1-mL prefilled syringes (5x1)
N449281057415 ML2.0	N449281057488 ML2.0	Carton of 5, 1-mL prefilled syringes (5x1)

Diagnosis Code (ICD-10-CM)^c

Below are the suggested diagnosis codes that may be appropriate when submitting claims for Beyfortus and its administration. The ICD-10 code should be linked to both the Beyfortus code 90380 or 90381, and the appropriate administration code. Assign the appropriate code based on review of the documentation in the medical record.

ICD-10-CM Code	Code Description	Suggested Use
Z29.11	Encounter for prophylactic immunotherapy for respiratory syncytial virus (RSV)	When a dose of RSV passive immunization is administered.
Applicable High-Risk Condition	Applicable High-Risk Condition Code Description	When a dose of RSV passive immunization is administered due to a high risk condition, add Z29.11 and the applicable ICD-10 code that describes each patient's high-risk condition.

Billing for Visits and an Immunization

If an immunization is the only service provided, a visit is not billed. When a separate and significant visit is provided along with an immunization, bill for the visit and the immunization services. When an immunization is administered at any type of visit, the modifier -25 may need to be attached to the evaluation and management code along with an ICD-10 which describes the reason for the visit to identify that it is separate and significantly different than other services billed. Check with your payers to confirm their requirements regarding the use of the -25 modifier.

IMPORTANT SAFETY INFORMATION [CONTINUED]

Warnings and Precautions

- **Hypersensitivity Reactions Including Anaphylaxis:** Serious hypersensitivity reactions have been reported following Beyfortus administration. These reactions included urticaria, dyspnea, cyanosis, and/or hypotonia. Anaphylaxis has been observed with human immunoglobulin G1 (IgG1) monoclonal antibodies. If signs and symptoms of anaphylaxis or other clinically significant hypersensitivity reactions occur, initiate appropriate treatment.

Please see additional Important Safety Information continued on [page 3](#).

Billing Examples

An infant is seen for a well visit and receives a 1-mL dose of Beyfortus. The physician counsels the parent on the passive immunization. The patient's plan is ready to accept the new administration codes and requires NDCs on claims.

Vaccines for Children (VFC) Billing

Be aware that many Medicaid plans stipulate which codes can be billed for administering immunizations available through the VFC program. Be sure to investigate the coding rules for your Medicaid plans, for this monoclonal antibody immunization, in case the required coding is different than the coding explained here.

CVX and MVX Codes

CVX and MVX codes are used to populate immunization registries. The CVX code indicates which product was used and the MVX code indicates the manufacturer of the product. When a MVX (manufacturer) code is paired with a CVX (product administered) code, the specific trade named product can be identified. The CVX codes for Beyfortus are **306** for a 0.5-mL dose and **307** for a 1-mL dose. The MVX for Sanofi is **PMC^d**.

IMPORTANT SAFETY INFORMATION [CONTINUED]

Warnings and Precautions

- Use in Individuals with Clinically Significant Bleeding Disorders:** As with other IM injections, Beyfortus should be given with caution to infants and children with thrombocytopenia, any coagulation disorder or to individuals on anticoagulation therapy.

Most common adverse reactions with Beyfortus were rash (0.9%) and injection site reactions (0.3%).

Please see Prescribing Information for [Beyfortus](#).
