

POWERFUL AGAINST COVID-19, GENTLE ON YOU.

NUVAXOVID is a vaccine to protect against COVID-19 for people who are:

- 65 years of age and older, or
- 12 years through 64 years of age at high risk for severe COVID-19

Vaccination with NUVAXOVID may not protect all people who receive the vaccine.

NUVAXOVID does not contain SARS-CoV-2, the virus that causes COVID-19. NUVAXOVID cannot give you or your child COVID-19.

SELECT IMPORTANT SAFETY INFORMATION

You or your child should not get NUVAXOVID if you had a severe allergic reaction to a previous dose of NUVAXOVID or to any of its ingredients.

PLEASE SEE ADDITIONAL IMPORTANT SAFETY INFORMATION THROUGHOUT AND FULL PRESCRIBING INFORMATION HERE.

WHAT IS NUVAXOVID?

WELL-ESTABLISHED TECHNOLOGY

It's the only **non-mRNA**, recombinant **protein-based** COVID-19 vaccine available

NUVAXOVID is protein based, so it's made using the same approach that has been **widely used in seasonal flu vaccines**

POWERFUL PROTECTION

In a clinical study proven to be **~90% effective** in protecting against illness from COVID-19

100% protection against moderate and severe disease in a clinical study

GENTLE ON YOU

In clinical trials, the majority of side effects were **mild or moderate without disrupting daily activities**

WHO IS NUVAXOVID FOR?

NUVAXOVID is a vaccine indicated for active immunization to prevent COVID-19 caused by severe acute respiratory syndrome SARS-CoV-2 **in adults 65+**

NUVAXOVID is also indicated for **individuals 12-64 years who have at least one underlying condition** that puts them at high risk for severe outcomes from COVID-19

Can be used **regardless of which COVID-19 vaccine you've had previously** and is convenient to get at the **same time** as your flu shot

NUVAXOVID is the only non-mRNA, recombinant protein-based COVID-19 vaccine recommended by CDC's ACIP

OTHER UNDERLYING HEALTH CONDITIONS

You are also eligible for NUVAXOVID if you have a condition that puts you at elevated risk of severe COVID-19, such as:

- COPD
- Chronic kidney disease
- Chronic liver disease
- Cerebrovascular disease, including stroke
- Heart failure and heart conditions
- Mental health conditions, including depression
- Physical inactivity
- Dementia
- Substance use disorders

The complete and most up-to-date list is available on the [CDC website](#).

DOSING AND ADMINISTRATION DETAILS

Ready to use—no dilution, mixing, or thawing required
Ships in a carton of 10 prefilled syringes, each containing 1 dose of 0.5mL

Store in standard refrigerator
Store prefilled syringes between 2 to 8°C (36 to 46°F)

Do not freeze. Protect from light
Only store prefilled syringes in a standard refrigerator

FAQs

Can I get NUVAXOVID if I previously had an mRNA vaccine for COVID-19?

Yes, you can get NUVAXOVID regardless of what COVID-19 vaccine you've had before.

Is it possible to get NUVAXOVID at the same time as a flu shot?

The CDC supports getting both vaccines at the same time.

SELECT IMPORTANT SAFETY INFORMATION

There is a remote chance that the vaccine could cause a severe allergic reaction, which would usually occur within a few minutes to one hour after getting a dose. For this reason, the vaccination provider may ask you or your child to stay at the place where you or your child received the vaccine for monitoring after vaccination. Signs of a severe allergic reaction can include: difficulty breathing, swelling of the face and throat, a fast heartbeat, a bad rash all over the body and/or dizziness and weakness.

Myocarditis (inflammation of the heart muscle) and pericarditis (inflammation of the lining outside the heart) have occurred in some people who have received NUVAXOVID. The chance of having this occur is very low. You should seek medical attention right away if you or your child have any of the following symptoms after receiving the vaccine: chest pain; shortness of breath; feelings of having a fast-beating, fluttering, or pounding heart.

Other side effects reported in clinical trials and/or post-approval use of NUVAXOVID include: Injection site reactions (pain/tenderness, swelling, redness and itching), fatigue or generally feeling unwell, muscle pain, headache, joint pain, nausea, vomiting, fever, chills, allergic reactions such as hives and swelling of the face, swollen lymph nodes, paresthesia (unusual feeling in the skin such as tingling or a crawling feeling), and hypoesthesia (decreased feeling or sensitivity, especially in the skin).
